

BACKFLOW MANAGEMENT

INTERFACES WITH

Utility Management

Clarity Backflow Management is designed for the backflow technician or administrative assistant in your organization's public works department who needs to track assemblies and testing results in addition to sending reminder notices.

Backflow Management allows you to keep track of all assemblies by type according to your personalized settings. You can easily create and print multiple testing notices to request current tests and even shut off services for failure to comply. The application also interfaces with Utility Management, meaning that you can use all the service addresses already stored in the Utility Management application—no need to search for and enter them again.

CAPABLE

- Send and track customized notices requesting assembly testing.
- Record and organize assembly information, including testing results.
- Track tester qualifications and send notices to testers as needed.

EFFICIENT

- Access assembly information in Customer and Assembly Inquiry.
- Be aware of pending notifications due while viewing assembly information.
- Keep desired amount of history for testing results received and notifications sent.

FLEXIBLE

- Create testing entry screens customized by assembly type.
- Set up multiple notification cycles that control when notices are sent.
- Record and easily access information about multiple assemblies at the same location.
- Create user-defined fields.

POWERFUL

- Custom reporting
- Powerful search options
- Interactive task list
- Electronic document and image attachments
- Application, task, and field-level security
- Print, save, and export all reports
- History and management tracking
